Cooperation with optimont© Polyesterfilms

Through our collaboration with Lars Jepsen, we at Bleher Folientechnik GmbH have been involved in a valuable development process around CleanInkTray. Lars has worked extensively with testing and development of the product using a wide range of foil types and double-sided adhesive materials, which has been essential in achieving the right solution.

During visits to our production facilities in Germany, Lars demonstrated strong technical insight and a hands-on approach to product development. Our collaboration has also extended to international exhibitions, where we have had the opportunity to work together and strengthen our professional relationship.

Over time, this cooperation has developed into both a strong partnership and a valued personal connection.

We highly recommend Lars Jepsen as a skilled and committed development partner.

Warm regards

Hans Bleher
